

HOW TO STORE WINE TIP SHEET

Here are some quick tips you can take with you when trying to store your favorite wines.

■ STEP 1

Keep wines still.

Avoid keeping wine in your car or anywhere that it can move around a lot, which changes the taste of it.

■ STEP 2

Keep bottles sideways.

This helps prevent the cork from drying out and shrinking, which can allow air into the bottle, compromising the integrity of the wine.

■ STEP 3

Keep wine in a cool place.

The ideal temperature for storing wine is between 45–65 degrees Fahrenheit.

■ STEP 4

Keep wine somewhere dark.

It's best to keep your wine somewhere out of direct light, which can prematurely age the wine.
